

ASCEND

SUMMER HOMEWORK

RISING 5TH GRADE

Dear Families,

In this packet, you will find reading, math, and science activities for your scholar to complete over the summer. These activities are meant to challenge your scholar's thinking, while also being fun and engaging. Please feel free to complete this work along with your scholar, asking questions and taking part in conversation as you go. This will make their experience even richer!

Research shows that kids who read over the summer are much more prepared for the next school year than those who do not. **For this reason, in addition to our selected book, your scholar should read 2-3 other age-appropriate chapter books over the summer.** On pages 4-6, you will find a reading log for your scholar to track their summer reading and for you to certify this with your signature. Your scholar will be better off if they complete these chapters and activities over time throughout the summer—switching back and forth between reading, math, and science—than if they try cramming them into the last few days.

Thank you for supporting your scholar's learning. Together, we can push them to new heights!

Happy summer!

Ascend Public Charter Schools

TABLE OF CONTENTS

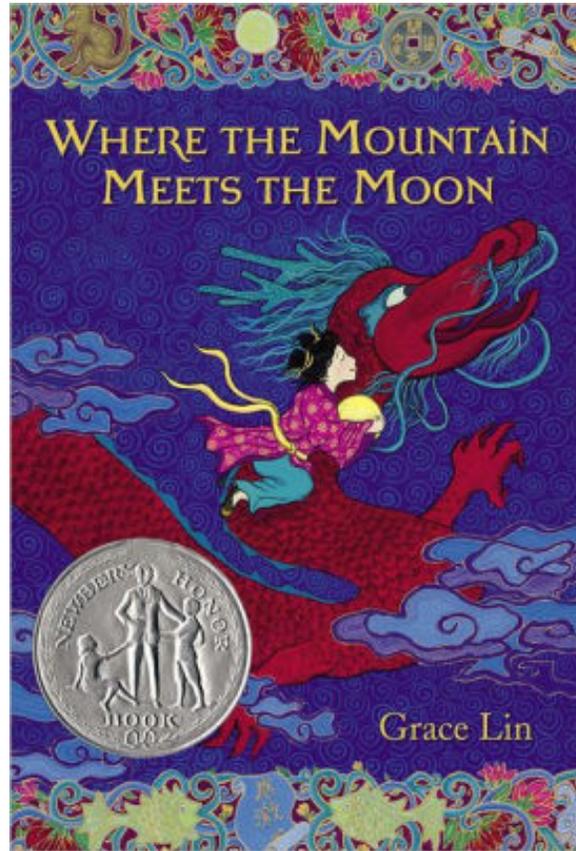

Reading.....pages 3-25

Math.....pages 26-57

Science.....pages 58-74

Social Studies.....pages 75-79

RISING 5TH GRADE READING

We know that kids love this book, so we have chosen it with the hope that it will encourage your love of reading this summer! As you read *Where the Mountain Meets the Moon*, take notes about major character insights and plot elements, as you have all year, and complete the chapter-by-chapter questions and activities in this packet.

In addition to *Where the Mountain Meets the Moon*, we hope you will choose at least a few other books to read over the summer. Please track your summer reading on the reading log that is on the following pages and ask a family member to sign.

RISING 5TH GRADE *Where the Mountain Meets the Moon* READING LOG

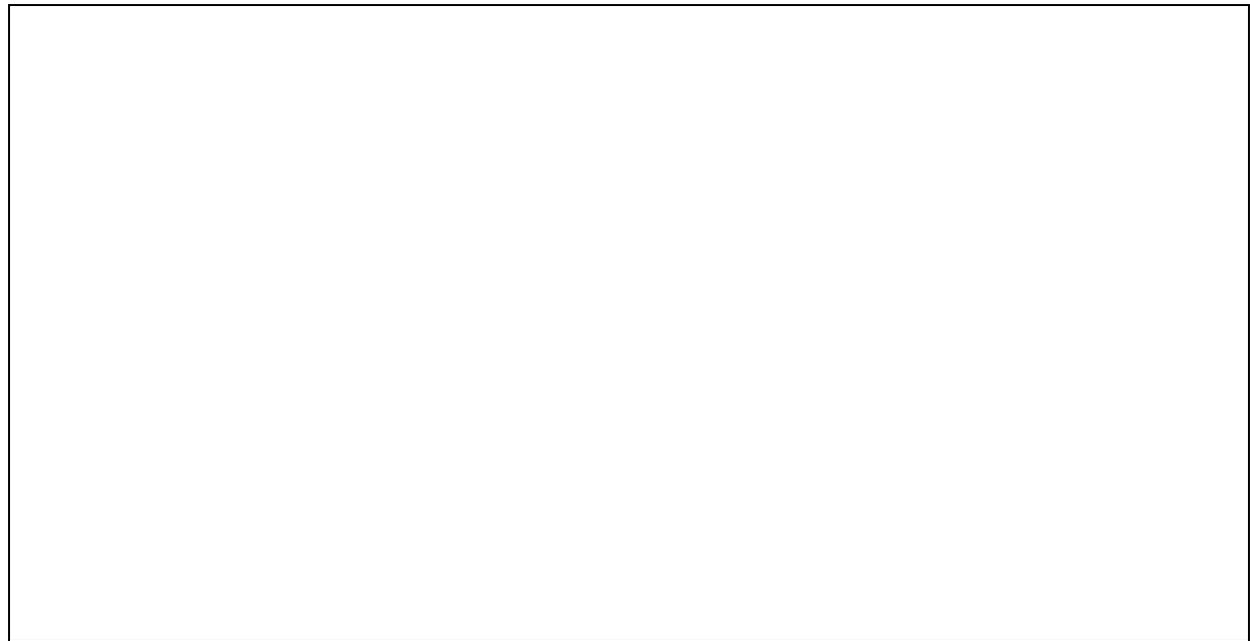

Book Title	Chapter	Date	Signature
<i>Where the Mountain Meets the Moon</i>	Chapter 1-2		
<i>Where the Mountain Meets the Moon</i>	Chapter 3-5		
<i>Where the Mountain Meets the Moon</i>	Chapter 6-9		
<i>Where the Mountain Meets the Moon</i>	Chapter 10-11		
<i>Where the Mountain Meets the Moon</i>	Chapter 12-14		
<i>Where the Mountain Meets the Moon</i>	Chapter 15-16		
<i>Where the Mountain Meets the Moon</i>	Chapter 17-19		
<i>Where the Mountain Meets the Moon</i>	Chapter 20-23		
<i>Where the Mountain Meets the Moon</i>	Chapter 24-26		
<i>Where the Mountain Meets the Moon</i>	Chapter 27-29		
<i>Where the Mountain Meets the Moon</i>	Chapter 30-34		
<i>Where the Mountain Meets the Moon</i>	Chapter 35-38		
<i>Where the Mountain Meets the Moon</i>	Chapter 39-41		
<i>Where the Mountain Meets the Moon</i>	Chapter 42-44		
<i>Where the Mountain Meets the Moon</i>	Chapter 45-48		

Chapter 1-2

Use three words to describe Minli based on the text. Think carefully and review the text if you need to.

Choose one of the words above. In 2-4 sentences, explain why you think it is a good word to describe Minli based on what she thinks, says, and does throughout the story.

Draw the Village of Fruitless Mountain based on details from the text.

Chapter 6-9

Grace Lin, the author of this book, uses lots of **figurative language** to help the reader imagine the setting and characters. Here’s a reminder of some important types of figurative language with examples from these chapters.

Type of figurative language	Definition	Example
Metaphor	A comparison between two unlike things that does not use “like” or “as”	“The fallen leaves made a soft carpet for her feet” (p. 34)
Simile	A comparison between two unlike things that uses “like” or “as”	“Ma made a noise like a shrieking cat” (p. 37)
Imagery	Descriptions that help the reader picture the scene	“...the night birds flew into the sky as she passed. Only when the sky lightened to gray...” (p. 34)

Now it’s your turn to find more examples of figurative language in this chapter. When you find an example of each type of figurative language, write the sentence in the box below and then draw a picture that shows how the language helps you better imagine the setting or characters.

Type	Example of this from the text	Picture
Metaphor		
Simile		
Imagery		

Chapter 10-11

In these chapters, Minli meets her new friend, Dragon. Use the information in these two chapters to write a **biography** (the story of his life) about Dragon. Include information about his birth and his life on the lines below and draw his picture in the box.

A writing area consisting of 18 horizontal lines. The first 10 lines are partially obscured by a large empty rectangular box on the right side of the page, which is intended for drawing a picture of Dragon.

Chapter 12-14

The Goldfish Man read that he would die at 19 in the Book of Fortune. If you had the chance, would you read the Book of Fortune? Why or why not? Respond in 2-3 sentences.

How does Minli trick the monkeys? Draw her trick below using a 3-box comic strip. Base your drawing on details from the text. Use drawings, dialogue bubbles, and labels.

(1)	(2)	(3)
-----	-----	-----

What does it show about the monkeys' personalities that they could be tricked this way? Explain why using 2 details from the text. Use 5-7 sentences.

Chapter 15-16

On the Paper of Happiness there is only one word written over and over. What do you think that one word is?

Explain why using 2-3 sentences.

A **myth** is a traditional story that is passed down through generations. Many of the stories in this book are myths. Many families, countries, and cultures have their own myths. The Story of the Dragon Gate in this chapter is one such myth that has been passed down through the goldfish over generations. Here are some others you may be familiar with:

- Greek and Roman myths: such as the myth of The Trojan Horse that led to the destruction of Troy
- Creation myths: explanations for how the world was created—many religions have their own
- Origin stories: myths that explain why something is the way that is, such as why chameleons change colors

Do some research by reading another myth, either online or at your local library. You may also ask your family members if they know of any famous or family myths! Then, write a brief summary (3-5 sentences) of the myth you read or heard below.

Name of the Myth: _____ This is a myth from: _____

My Summary:

Chapter 20-23

Authors give us subtle (small) clues throughout the story that characters are beginning to change. Readers can pay attention to a character’s **actions** to find these clues. Find three clues that the author gives the reader in Chapter 20 to show that Ma is beginning to change. Write the three clues you found below:

1. _____
2. _____
3. _____

Draw a 6-box comic strip that explains how and why the king tricks the peach seller and what Minli discovers. Think about what happens first, second, etc. Use drawings, dialogue bubbles, and labels.

(1)	(2)	(3)
(4)	(5)	(6)

What is the “borrowed line” that Minli finds?

Chapter 24-26

What is the "borrowed line" that Dragon finds?

Which of the borrowed lines do you think is the real one? Explain why using 2-3 sentences.

Ba has had many thoughts about what the word on the Paper of Happiness could have been. Now he thinks it is "faith." Why does he think this? Explain why using 3-4 sentences.

What do you think the word on the Paper of Happiness is?

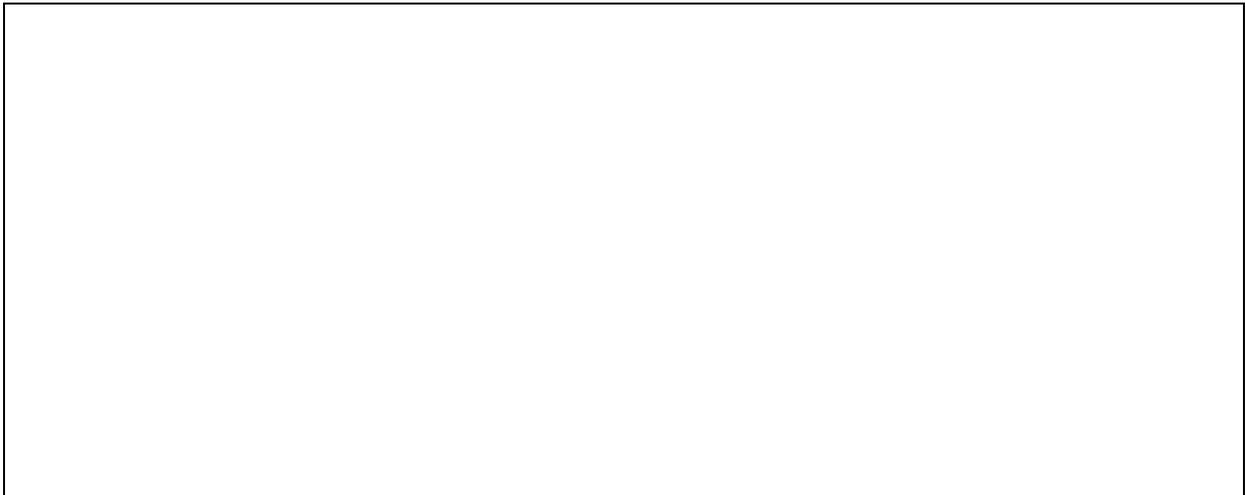

Chapter 27-29

Remember that authors give us subtle (small) clues throughout the story that characters are beginning to change. Readers can pay attention to a character's **internal thoughts**, or what they think but do not say out loud, to show that they are changing. Find three clues that the author gives the reader in Chapter 27 to show that Minli is beginning to change. Write the three clues you found below:

- 1. _____
- 2. _____
- 3. _____

Why do you think that Minli is beginning to change? Use 2 details from the text to support your answer. Your response should be 3-5 sentences.

Draw the tiger using details from the text:

Chapter 42-44

Many stories have a **moral**, or a lesson that the reader should learn from them about how to live their life.

What is the moral of Wu Kang's story? Explain using 2 details from the text and 5-7 sentences.

Minli can only ask the Old Man in the Moon one question. What question does she ask, and what does this reveal about how she has changed? Use details from the text and 3-5 sentences.

If you had the chance to ask the Old Man in the Moon one question, what would you ask?

Chapter 45-48

When the Goldfish Man returns to the village, he realizes that much has changed. What were the village and its residents like before, and what are they like now? Think about setting, characters, attitudes, etc. Find at least 5 differences to write below.

What was the village like at the beginning of the text?	What is the village like at the end of the text?

Who or what is responsible for this change? Respond in 3-5 sentences.

Did you like this story? Would you recommend it to a sibling, classmate, or friend? Why or why not? On the following pages, you will write a short book report, including details about the story and your own opinion about it. You will need to review portions of the book to remember some of the specifics.

Book Report

Title: _____

Author: _____

Main Characters (list as many as you think are important):

Setting (when and where the story takes place):

Note: You may want to list multiple settings.

Plot Summary (you can't include every little detail, so think about the most important parts—the main problems, solutions, turning points, exciting action). Your summary should be 7-10 sentences long.

RISING 5TH GRADE MATH

Skills to master before entering fifth grade:

- Memorizing multiplication facts within 100
- Adding and subtracting multi-digit numbers
- Multiplying 2 x 2 digit numbers (ex. 45×93) and 4 x 1 digit numbers (ex. 2783×5)
- Dividing 4 digit numbers by 1 digit numbers (ex. $8369 \div 5$)
- Find all factors of any number between 1-100 (ex. 12: 1, 2, 3, 4, 6, 12)
- Identify and create equivalent fractions (ex. $\frac{2}{3} = \frac{4}{6}$)
- Read and write decimals to the tenths place (ex. 0.7 as “seven tenths”) and to the hundredths place (ex. 0.45 as “forty five hundredths”)

Activities to do this summer to prepare for fifth grade:

- Math flashcards (see next page for instructions)
- Math games (included in this packet)
- Math practice sheets (included in this packet)

Recommended materials

- 1 pack of 3 x 5” index cards
- 1 deck of playing cards (with jokers and face cards removed)
- 2 paper clips

RISING 5TH GRADE MATH FACTS

Learning and practicing these basic math facts is the best way to get ready for fifth grade. You may have brought home a set of flashcards. If not, you can make your own!

Instructions: Each day, run through the flash cards. Make two piles: one for the facts you can recall automatically (in less than 3 seconds, without counting on fingers), and one for the facts you need to practice more. Run through this pile 2-3 more times. The next day, shuffle the piles and repeat. Practicing daily will ensure you are ready for fifth grade!

Multiplication within 100

On the front of a 3 x 5" index card, write the fact *without the answer*.
On the back of each card, write the answer.

0	1	2	3	4	5
0 x 0 = 0	1 x 0 = 0	2 x 0 = 0	3 x 0 = 0	4 x 0 = 0	5 x 0 = 0
0 x 1 = 0	1 x 1 = 1	2 x 1 = 2	3 x 1 = 3	4 x 1 = 4	5 x 1 = 5
0 x 2 = 0	1 x 2 = 2	2 x 2 = 4	3 x 2 = 6	4 x 2 = 8	5 x 2 = 10
0 x 3 = 0	1 x 3 = 3	2 x 3 = 6	3 x 3 = 9	4 x 3 = 12	5 x 3 = 15
0 x 4 = 0	1 x 4 = 4	2 x 4 = 8	3 x 4 = 12	4 x 4 = 16	5 x 4 = 20
0 x 5 = 0	1 x 5 = 5	2 x 5 = 10	3 x 5 = 15	4 x 5 = 20	5 x 5 = 25
0 x 6 = 0	1 x 6 = 6	2 x 6 = 12	3 x 6 = 18	4 x 6 = 24	5 x 6 = 30
0 x 7 = 0	1 x 7 = 7	2 x 7 = 14	3 x 7 = 21	4 x 7 = 28	5 x 7 = 35
0 x 8 = 0	1 x 8 = 8	2 x 8 = 16	3 x 8 = 24	4 x 8 = 32	5 x 8 = 40
0 x 9 = 0	1 x 9 = 9	2 x 9 = 18	3 x 9 = 27	4 x 9 = 36	5 x 9 = 45
6	7	8	9	10	
6 x 0 = 0	7 x 0 = 0	8 x 0 = 0	9 x 0 = 0	10 x 0 = 0	
6 x 1 = 6	7 x 1 = 7	8 x 1 = 8	9 x 1 = 9	10 x 1 = 10	
6 x 2 = 12	7 x 2 = 14	8 x 2 = 16	9 x 2 = 18	10 x 2 = 20	
6 x 3 = 18	7 x 3 = 21	8 x 3 = 24	9 x 3 = 27	10 x 3 = 30	
6 x 4 = 24	7 x 4 = 28	8 x 4 = 32	9 x 4 = 36	10 x 4 = 40	
6 x 5 = 30	7 x 5 = 35	8 x 5 = 40	9 x 5 = 45	10 x 5 = 50	
6 x 6 = 36	7 x 6 = 42	8 x 6 = 48	9 x 6 = 54	10 x 6 = 60	
6 x 7 = 42	7 x 7 = 49	8 x 7 = 56	9 x 7 = 63	10 x 7 = 70	
6 x 8 = 48	7 x 8 = 56	8 x 8 = 64	9 x 8 = 72	10 x 8 = 80	
6 x 9 = 54	7 x 9 = 63	8 x 9 = 72	9 x 9 = 81	10 x 9 = 90	

RISING 5TH GRADE MATH GAMES

Playing games is a great way to practice your facts! The chart below provides a list of math games you can play. Below, read directions for how to play.

Game	Number of Players	Materials Needed	Directions
Multiplication Madness	2	<ul style="list-style-type: none"> • Multiplication Madness game board (provided in this packet) • 2 different sets of colored space markers • 2 paper clips 	Player A places a paper clip on two numbers at the bottom of the game board (ex. 5 and 8), multiplies them, and covers the product (ex. 40) on the game board with a game marker. Player B moves ONE of the paper clips to a different number (ex. 5 → 2) and covers the new product on the game board (ex. 2 x 8 = 16) with a different colored marker. Continue taking turns. The first one with three in a row (vertically, horizontally, or diagonally) wins!
Make 20	2	<ul style="list-style-type: none"> • Make 20 instructions (included in this packet) • 1 deck of cards (remove the jokers and face cards) 	You have to see it to understand it! Read the "Make 20" instructions in your packet.
Race to 500	2-4	<ul style="list-style-type: none"> • 1 deck of cards (remove the jokers and face cards) • 1 blank piece of paper per person 	You have to see it to understand it! Read the "Race to 500" instructions in your packet.
3-Digit Subtraction Action	2	<ul style="list-style-type: none"> • 1 deck of cards (remove the jokers and face cards) • 1 blank piece of paper per person 	You have to see it to understand it! Read the "3-Digit Subtraction Action" instructions in your packet.
Make the Largest Product	2-4	<ul style="list-style-type: none"> • 1 deck of cards (remove the jokers and face cards) • 1 blank piece of paper per person 	You have to see it to understand it! Read the "Make the Largest Product" instructions in your packet.
Three in a Row	2-3	<ul style="list-style-type: none"> • Three in a Row game board (versions 1 and 2 provided in this packet) • 2-3 different sets of colored space markers • Note: the directions say you need a calculator, but this is not necessary 	Players take turns picking one number from Box A and one from Box B. Multiply the two numbers and cover the product. The first one to make 3 in a row wins.

Multiplication Madness!

1	2	3	4	5	6
7	8	9	10	12	14
15	16	18	20	21	24
25	27	28	30	32	35
36	40	42	45	48	49
54	56	63	64	72	81

1 2 3 4 5 6 7 8 9

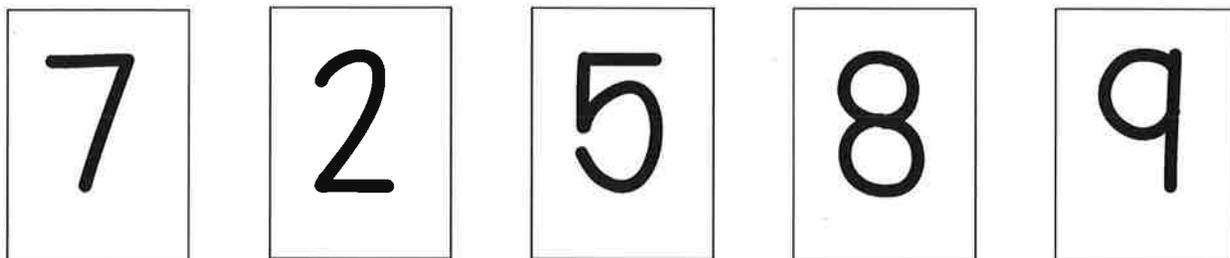

Make 20

Two players

Materials: One deck of cards with jokers and face cards removed.

The Way to Play:

- Deal 5 cards face up between the 2 players and stack the remaining cards face down in a pile.
- Players try to Make 20 using the 5 cards with any operation (add, subtract, multiply, or divide) as many times as necessary.
- If the player can make 20 they say, **'20!'** then must verbalize how they reached the total. The player that can make 20 using the most cards wins.
- When all cards have been used, the player with the most cards is the winner.

Example:

Player 1: $9 - 7 = 2 \times 5 = 10 + 2 = 12 + 8 = 20$

Player 2: $7 + 5 = 12 + 8 = 20$

Player 1 wins and collects all five cards.

Variation:

- Use the face cards as 11's, 12's, or even 0.
- Each player is only allowed to use each operation once.
- Change the number of cards (use 4 or 6 instead of 5)
- With younger students, make 10
- Be creative and have fun playing!

Race to 500

You will need: something to write on (paper, journal or whiteboard), digit cards (0-9)

1. Deal four digit cards to each person.
2. Use your four digit cards to make two 2-digit numbers.
Example: Mary has the cards 3, 5, 7, 2.
She makes the numbers 57 and 23.
3. Find the difference between your two numbers. This is your score for round one.
Example: $57 - 23 = 34$.
Mary's score for round one is 34.
4. Shuffle the cards and repeat. Add your score to your score from the previous round.
5. Continue playing until one player's score reaches 500.

3-Digit Subtraction Action

You will need: 4 sets of digit cards (0-9), journal and a pencil

1. Find a partner. Shuffle the digit cards and place them in a pile facedown between you and your partner.
2. Draw 6 cards from the pile.
Arrange them cards to make a subtraction expression with two 3-digit numbers.
3. The goal is to make a expression with the difference as close to 0 as possible.

3	7	4	-	2	9	8
---	---	---	---	---	---	---

4. Record your thinking in your journal to prove your difference to your partner. You and your partner will check each other's work.
5. The player with the difference closest to 0 gets one point.
6. The first player to reach 10 points wins!

Make the Largest Product

7	3	2	5
x			

Materials: numeral cards 0-9 (4 of each), calculator

1. Shuffle the cards and place them facedown in a stack.
2. Take four cards each from the top of the stack and use them to create a 3-digit by 1-digit multiplication problem. Arrange your cards to make the largest product possible.
3. Write and solve your multiplication problem.
4. Use a calculator to check each other's work. The player with the largest product scores one point. Subtract one point for an incorrect answer.
5. Continue play. The first player to reach five points is the winner.

RISING 5TH GRADE SUMMER HOMEWORK

three-in-a-row

Version 1

box a	box b
18, 23, 35, 47, 79, 91	2, 3, 5, 7, 8, 9

158	637	184	141	728	90
144	69	329	175	46	162
819	395	36	161	237	280
553	94	423	315	115	273
54	711	235	632	126	70
455	376	105	182	207	245

This is a 2- or 3-player game. You will need color counters (different color for each player), game board, and calculator.

Players take turns picking one number from Box A and one from Box B. On your turn, announce your numbers and your choice for the product of your numbers. Explain your strategy for finding the answer. Another player can check your answer with a calculator after you have announced your choice. If your answer is correct, place your counter on the appropriate space on the board. If the answer is incorrect, you may not place your counter on the board. Your goal is to be the first one to make "three-in-a-row," horizontally, vertically, or diagonally.

Version 2

three-in-a-row

box a	box b
18, 23, 35, 47, 79, 91	14, 29, 35, 45, 54, 89

1,645	1,274	522	2,115	1,242	1,602
3,115	1,890	1,363	3,555	805	252
2,639	630	1,575	490	7,031	4,266
1,035	2,047	972	667	1,106	2,765
1,015	322	4,914	1225	4095	8,099
2,538	4,183	3185	810	2,291	658

This is a 2- or 3-player game. You will need color counters (different color for each player), game board, and calculator.

Players take turns picking one number from Box A and one from Box B. On your turn, announce your numbers and your choice for the product of your numbers. Explain your strategy for finding the answer. Another player can check your answer with a calculator after you have announced your choice. If your answer is correct, place your counter on the appropriate space on the board. If the answer is incorrect, you may not place your counter on the board. Your goal is to be the first one to make "three-in-a-row," horizontally, vertically, or diagonally.

RISING 5TH GRADE MATH PRACTICE PAGES

In addition to the games and flashcards, you should practice math skills by completing the pages provided. You should complete about two pages (front and back = 1 page) per week.

1. The koala bear is 21 inches tall. The elephant is 9 times as tall as the koala. How tall is the elephant?

Answer: _____

Write a number sentence that matches the problem.

2. The auditorium has 96 seats. There are eight rows of seats with the same number of seats in each row. How many seats are in each row?

Answer: _____

Write a number sentence that matches the problem.

3. Francesca earned \$42 selling candy bars. Bobby earned 4 times as much money selling lemonade. How much money did Bobby earn?

Answer: _____

Write a number sentence that matches the problem.

4. Mr. Webb's class started the year with 6 boxes of pencils with 75 pencils in each box. Now they have only 209 left. How many pencils have they used so far this year?

Answer: _____

Write a number sentence that matches the problem.

5. Mrs. Maloney has 161 books in her library. She wants to give out all of the books to 13 kindergartners so that each kindergartner gets the same amount of books. How many books will each kindergartner get?

Answer: _____

Write a number sentence that matches the problem.

6. Eight students want to share 6 candy bars so that all students get the same amount. How much does each child get?

Answer: _____

Write a number sentence that matches the problem.

7. The floor of Mrs. Brown's classroom is a rectangle. The width is 27 feet and the length is 36 feet. What is the area of Mrs. Brown's classroom?

Answer: _____

Write a number sentence that matches the problem.

8. There is a trail that is 3 miles long from the park to the beach. At every $\frac{1}{4}$ mile there is a flag. How many flags are there on the trail?

Answer: _____

Write a number sentence that matches the problem.

9. There are 3 quarts of juice for the children at the birthday party. If each serving of juice is $\frac{1}{3}$ of a quart, how many children will get juice?

Answer: _____

Write a number sentence that matches the problem.

10. There is a large banner outside of the supermarket that is painted red, blue, and green. $1\frac{3}{10}$ feet of the banner is blue, $1\frac{2}{10}$ feet of the banner is red, and $1\frac{8}{10}$ feet of the banner is green. How long is the banner?

Answer: _____

Write a number sentence that matches the problem.

11. Each of seven dancers on the step team ate $\frac{2}{3}$ of an energy bar. How many energy bars did the dancers eat?

Answer: _____

Write a number sentence that matches the problem.

12. The floor of Jalen's classroom is a rectangle. The width is 27 feet and the length is 36 feet. What is the area of Jalen's classroom?

Answer: _____

Write a number sentence that matches the problem.

13. Mario made 2 rectangular shaped pizzas. Mario ate $\frac{1}{12}$ of the two pizzas. How much pizza is left?

Answer: _____

Write a number sentence that matches the problem.

14. Federico ran 3 miles before school. After school he ran $\frac{3}{8}$ of a mile home. How many more miles did he run before school than after school?

Answer: _____

Write a number sentence that matches the problem.

Common Core Standards Practice

4.NBT.B.5 Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

1. Find the product.

$$\begin{array}{r} 2,056 \\ \times \quad 9 \\ \hline \end{array}$$

2. Find the product.

$$\begin{array}{r} 89 \\ \times 27 \\ \hline \end{array}$$

3. Hannah is helping her grandmother make a quilt. Each row will have 16 squares. There will be 14 rows.

a. Draw a model of the quilt.

b. How many squares will Hannah and her grandmother need to make?

4. Juan bakes and sells dog treats at the farmers market. He always fits 12 treats on a cookie sheet. On Saturday, he bakes 8 batches of dog treats.
- Draw an array to match the problem situation.
 - Write an equation to show how many dog treats Juan bakes.
 - Solve the equation you wrote.
5. An Olympic-sized swimming pool is 50 meters long and 25 meters wide.
- Draw a model to show the area of an Olympic-sized pool.
 - Write an equation to show the area of an Olympic-sized pool.
 - Solve the equation you wrote.
6. Principal Watts walks 5 miles every day. How many miles does he walk in 1 year, or 365 days? Write and solve an equation.

Common Core Standards Practice

4.NBT.B.6 Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

1. Find the quotient.

$$486 \div 3$$

2. Find the quotient.

$$1,250 \div 7$$

3. Aaron raises chickens. He sells chicken eggs by the dozen. On Friday, Aaron sold 96 eggs. How many dozen eggs did Aaron sell?

a. Draw a rectangular array to model the problem situation.

b. Write an equation that matches the model you drew.

c. Solve the equation you wrote.

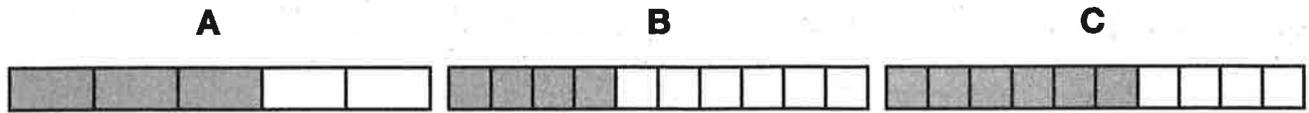

4. Claire helps at her mother's flower shop. This week, her mother received a shipment of 250 sunflowers. Claire put them in bundles of 8 flowers. How many bundles did she make? Did she have any bundles with fewer than 8 sunflowers? If so, how many more sunflowers would she need to complete the bundle?

5. A tailor sews 8 buttons on each jacket he makes. He has 220 buttons. On how many jackets can he sew buttons?

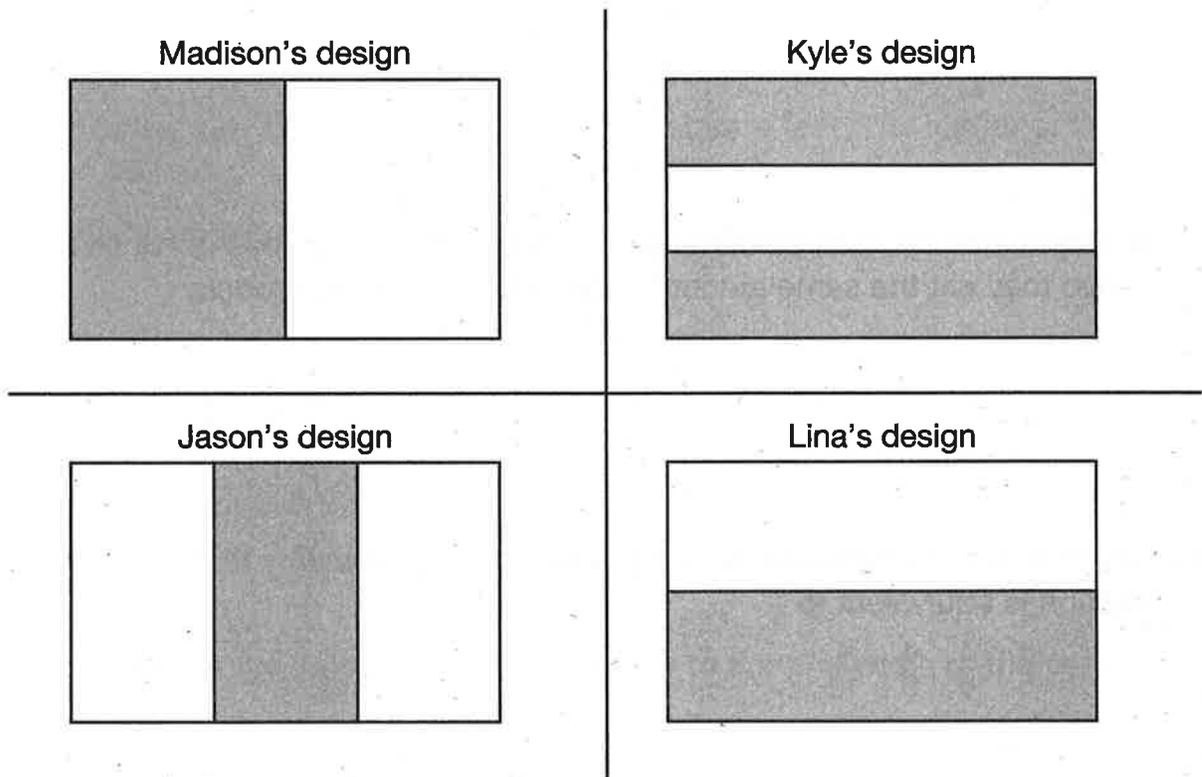

6. Green Valley City Park has an area of 6,557 square feet. The length of the park is 83 feet.
 - a. Draw a model to show Green Valley City Park.

 - b. Write and solve an equation to show how to find the width of the park.

3. Which two models show equivalent fractions? Explain how you know.

4. Four students draw a design for a class flag. Each flag is black and white. Shown below are four designs. Which designs have the same fractions of black and white? Explain how you know.

Common Core Standards Practice

4.NF.A.2 Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as $\frac{1}{2}$. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual fraction model.

1. Which fraction is less than $\frac{5}{8}$?

A $\frac{7}{8}$

B $\frac{6}{8}$

C $\frac{5}{6}$

D $\frac{4}{8}$

2. Which fraction is greater than $\frac{1}{7}$?

A $\frac{1}{5}$

B $\frac{1}{8}$

C $\frac{1}{9}$

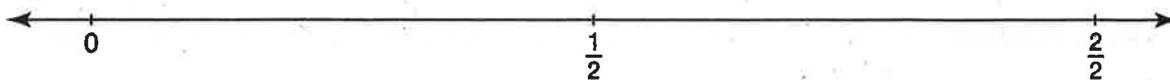

D $\frac{1}{10}$

3. A kitchen floor has green, yellow, and white tiles. Of those tiles, $\frac{2}{5}$ are green and $\frac{2}{10}$ are yellow. Are there more green tiles than yellow tiles? Explain how you know.

4. Barry got a small sandwich for lunch and ate $\frac{1}{2}$ of his sandwich. Jonah got a large sandwich and ate $\frac{1}{2}$ of his sandwich. Did Jonah and Barry eat the same amount for lunch? Explain how you know.

5. Place these fractions on the number line below. Then complete the inequalities.

$$\frac{2}{5} \quad \frac{1}{4} \quad \frac{4}{6} \quad \frac{5}{8}$$

- a. $\frac{2}{5}$ _____ $\frac{1}{2}$ and $\frac{4}{6}$ _____ $\frac{1}{2}$ so $\frac{2}{5}$ _____ $\frac{4}{6}$.
- b. $\frac{5}{8}$ _____ $\frac{1}{2}$ and $\frac{1}{4}$ _____ $\frac{1}{2}$ so $\frac{5}{8}$ _____ $\frac{1}{4}$.
- c. $\frac{4}{6}$ _____ $\frac{1}{2}$ and $\frac{4}{6}$ _____ $\frac{2}{2}$ and $\frac{5}{8}$ _____ $\frac{1}{2}$ and $\frac{5}{8}$ _____ $\frac{2}{2}$ and $\frac{5}{8}$ _____ $\frac{4}{6}$.
6. Tell which fraction is greater: $\frac{6}{8}$ _____ $\frac{6}{10}$. Write < or >.

Draw models of fraction strips to prove your answer.

7. Inez compared the fractions $\frac{1}{5}$ and $\frac{1}{3}$. She said, "I compared the denominators. Because 5 is greater than 3, $\frac{1}{5}$ is greater than $\frac{1}{3}$."

Is Inez correct? Explain your answer.

Common Core Standards Practice

4.NF.C.5 Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100.

1. For each of these fractions, write the equivalent fraction with a denominator of 100.

$$\frac{4}{10} = \underline{\hspace{2cm}}$$

$$\frac{7}{10} = \underline{\hspace{2cm}}$$

$$\frac{2}{10} = \underline{\hspace{2cm}}$$

$$\frac{9}{10} = \underline{\hspace{2cm}}$$

$$\frac{18}{10} = \underline{\hspace{2cm}}$$

$$\frac{26}{10} = \underline{\hspace{2cm}}$$

2. Find the sums.

a. $\frac{4}{10} + \frac{3}{100} =$ _____

b. $\frac{7}{10} + \frac{2}{100} =$ _____

c. $\frac{9}{10} + \frac{3}{100} =$ _____

d. $\frac{1}{100} + \frac{5}{10} =$ _____

e. $\frac{6}{100} + \frac{8}{10} =$ _____

Find the sums.

3. $\frac{5}{10} + \frac{2}{100} =$ _____

4. $\frac{7}{100} + \frac{2}{10} =$ _____

5. $\frac{8}{10} + \frac{3}{100} =$ _____

6. $\frac{4}{100} + \frac{3}{10} =$ _____

7. $\frac{6}{100} + \frac{1}{10} =$ _____

8. $\frac{36}{10} + \frac{8}{100} =$ _____

9. $\frac{11}{10} + \frac{7}{100} =$ _____

10. $\frac{5}{100} + \frac{2}{10} =$ _____

Common Core Standards Practice

4.NF.C.6 Use decimal notation for fractions with denominators 10 or 100.

1. Which is the decimal form of $\frac{4}{10}$?

A 0.4

B 4.0

C 0.04

D 0.44

2. Which fraction equals 0.29?

A $\frac{2}{9}$

B $\frac{2}{10}$

C $\frac{29}{100}$

D $\frac{29}{10}$

3. Write these fractions in decimal form.

$$\frac{2}{10} = \underline{\hspace{2cm}}$$

$$\frac{5}{10} = \underline{\hspace{2cm}}$$

$$\frac{22}{100} = \underline{\hspace{2cm}}$$

$$\frac{78}{100} = \underline{\hspace{2cm}}$$

$$\frac{45}{100} = \underline{\hspace{2cm}}$$

$$\frac{92}{100} = \underline{\hspace{2cm}}$$

4. Write these decimals as fractions. Use denominators of either 10 or 100.

$$0.3 = \underline{\hspace{2cm}}$$

$$0.18 = \underline{\hspace{2cm}}$$

$$0.73 = \underline{\hspace{2cm}}$$

$$0.8 = \underline{\hspace{2cm}}$$

$$0.48 = \underline{\hspace{2cm}}$$

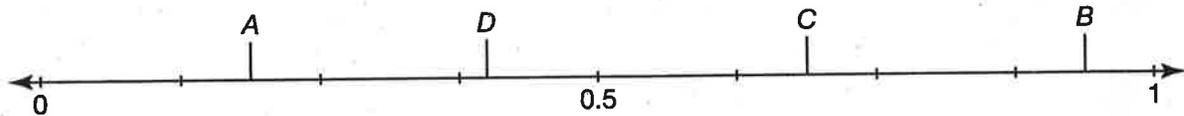

$$0.67 = \underline{\hspace{2cm}}$$

5. The number line shows tenths from 0 to 1.

- a. Write decimals to complete the number line.
- b. Below the number line, add leaders and labels for these three numbers: 0.68, 0.25, and 0.82.

6. The number line shows tenths from 0 to 1.

What decimals are shown by the short lines with letters? If you are not sure, write your best estimate.

Line A: _____

Line B: _____

Line C: _____

Line D: _____

Why is it difficult to identify lines C and D exactly?

Common Core Standards Practice

4.NF.C.7 Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual model.

1. Plot these two decimals on the number line below.

0.43 0.39

Write an inequality comparing the two decimals. Explain your answer using the number line.

2. Plot these two decimals on the number line below.

0.28 0.82

Write an inequality comparing the two decimals. Explain your answer using the number line.

3. The baseball team started the game with two one-liter bottles of water. At the end of the game, the first bottle had 0.3 liters left and the second had 0.4 liters left.

Draw a model to show the amount of water left in each bottle after the game.

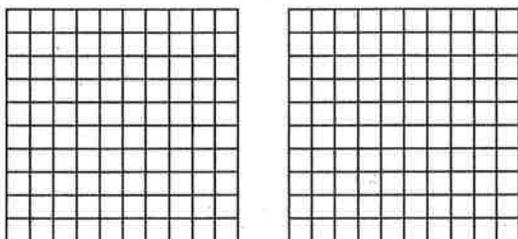

Out of which liter bottle did more player take water? the first or the second?

4. Simon and Danielle are on the baseball team. Last season, 0.15 of Simon's hits were home runs, and 0.15 of Danielle's hits were also home runs.

a. Can you tell whether Simon and Danielle hit the same number of home runs?

b. Frank is also on the baseball team. Of his hits last season, 0.19 were home runs. Can you tell if he hit more home runs than Simon or Danielle? Explain.

5. Draw a decimal square to represent 0.33 and 0.27.

Which is greater?

_____ < _____

Rising 5th Grade Science

Activities to do this summer to prepare for fifth grade:

1. Complete the Science Choice Board.
 - Choose 3 science activities from the choice board.
 - Put an X on the square to mark the activity as complete.
 - Remember: You may substitute materials for other similar items that you have at home!
 - **Important Safety Note:** You must ask an adult’s permission before using materials, conducting an investigation, or visiting any sites on the internet.

2. Read a book about science

Science Books

Look for these great books about science at your local library through e-book access, or try ReadWorks! ReadWorks offers richly illustrated eBooks and a read aloud feature to support readers at all levels. You'll find a quick tutorial video about using eBooks at https://about.readworks.org/parents_remote.html

Or, if possible, look for these great books about science at your local library!

Titles	Author	Topic
Astrophysicist and Space Advocate Neil deGrasse Tyson	Marne Ventura	Have you ever stared into the night sky, full of stars and planets? As a kid, Neil deGrasse Tyson was star-struck when he first visited a planetarium. The universe was calling him. Now he is a famous astrophysicist with a TV show and over 1 million twitter followers. Follow his path from fascinated kid to popular space expert.
Electrical Wizard: How Nikola Tesla Lit Up the World	Oliver Dominguez	Learn all about Tesla who contributed to the field of electricity and technology.
What Color Is My World?: The Lost History of African-American Inventors	Kareem Abdul-Jabar	Did you know that James West invented the microphone in your cell phone? That Fred Jones invented the refrigerated truck that makes supermarkets possible? Or that Dr. Percy Julian synthesized cortisone from soy, easing untold people’s pain? These are just some of the black inventors and innovators scoring big points in this dynamic look at several unsung heroes who shared a desire to improve people’s lives. Learn more in this book by basketball legend Kareem Abdul-Jabar.

Virtual trips

Summer is a great time to explore science in the city. Consider taking a virtual trip to these exciting sites!

Place	Website	What to do
Brooklyn Botanic Gardens	https://www.bbg.org/	Visit the Brooklyn Botanic Gardens website for activities, games, recipes, and crafts your scholar can do at home.
Prospect Park Zoo (or any zoo!)	https://prospectparkzoo.com/	Have your scholar take notes on animals and their structures.

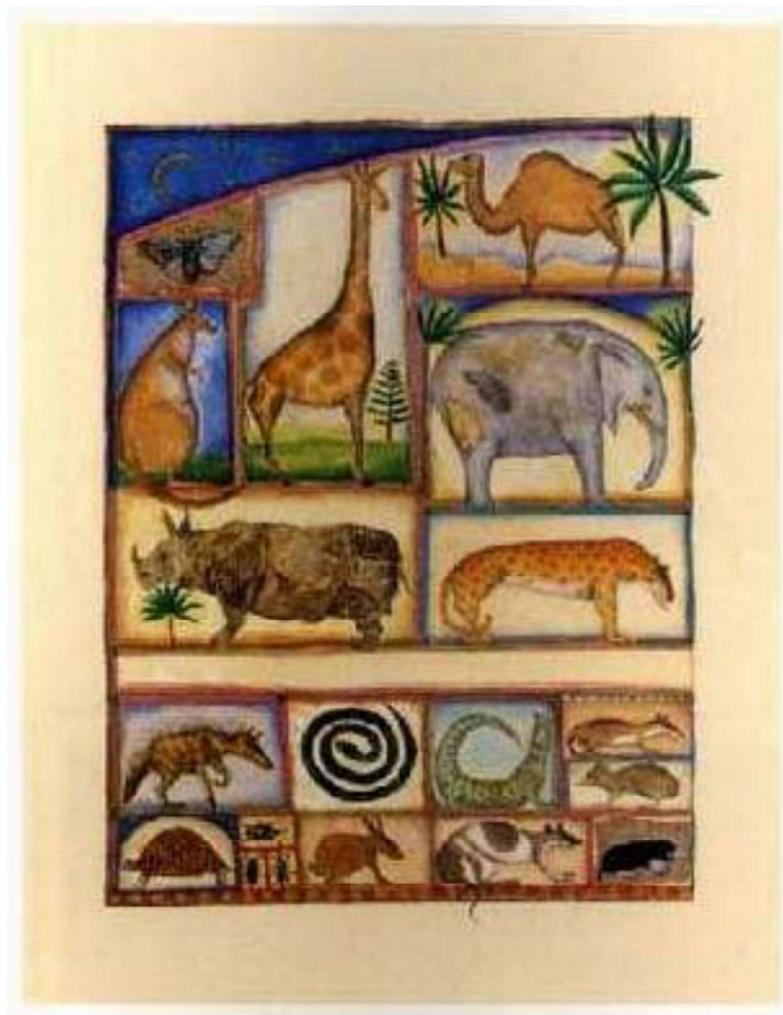

RISING 5TH GRADE SUMMER HOMEWORK

If my animal could talk, it would say...

My animal **would** / **would not** make a good pet because...

Draw your animal as a baby with its parents (make sure to include **inherited traits**):

Name _____

Penny Experiment

Ever wondered what an atom is? Atoms are tiny little particles invisible to the human eye and are basic building blocks of almost everything we can see, touch, feel and taste. Even *you* are made up of trillions and trillions of atoms. Some things, like pennies, are made up of only a *single kind of atom*. **Copper** used to

make pennies are made up mostly of **copper atoms**. When those **copper atoms** contact other atoms, sometimes they join together. A **copper atom** that sticks to an **oxygen atom** creates a **molecule** called **copper oxide**. This is what makes a bright and shiny penny look dirty when that penny is old.

This experiment will show you how to take apart the copper oxide from the penny.

1. Collect six old, tarnished pennies.
2. Fill six cups with the following, and remember to label them:
Vinegar + Salt, Lemon Juice, Cola, Ketchup, Soap + Water, Your choice of fluid!
3. Toss a penny into each cup and soak them for 10 minutes. **Which solutions do you think will work? Which ones won't work? Which will work best?**
4. Dry the pennies on a paper towel and answer the questions below.

Questions

Which penny is the shiniest?

Which penny is the dullest?

Which result surprised you?

Intro: No-Sew 10 Minute T-Shirt Tote

Did you know that about 100 billion plastic bags are used annually in the US alone and only about 2% of them are recycled?

It's a scary statistic but we can all do small things to help our earth! Using reusable bags or totes is a very easy way to do your part. It is a great alternative to buying reusable bags or taking merchandise home in plastic bags from stores and much more fashionable! They are durable and will last a long time.

Everyone at some time or another has probably had an old t-shirt that they didn't need or like anymore. Instead of tossing it make it into a reusable tote in about 10 minutes.

All you will need is an old t-shirt and a pair of scissors.

Step 1: Cut Sleeves Off of Shirt

You can use a short or long sleeved t-shirt. It won't matter because you will be cutting the sleeves off anyway. Lay your t-shirt out on a flat work surface. Using a pair of scissors, carefully cut the sleeves off of the shirt.

Step 2: Cut Neck Out of Shirt

You can use a large bowl and draw around it on your fabric to get a nice rounded scoop shape or just eyeball it and cut the scoop. I just eyeballed it.

Step 3: Cut Slits and Tie Knots

At the bottom of the shirt cut slits about every inch through both layers (length will depend on the size of the shirt so you will have to make the call) long enough that you will be able to tie them twice. Remember the shirt will stretch with weight so try to make sure your tote isn't going to hang to your feet with filled with goodies!

Keep the slits lined up and starting with one end tie the aligning front and back pieces together. Tie together in double knots until you have done the entire row. If you don't want the knots to show you can tie them on the inside for a less fringed look.

Step 4: Tie Decorative Handles

This step is optional. Cut small strips of extra fabric and tie small knots on the tops of the handles for a more decorative look. The tote is finished and ready to use!

Seafloor Spreading Model

You grow, plants grow, and yes—rocks grow too! They just grow very slowly.

The earth is made up of different rocky plates, kind of like a big jigsaw puzzle. Together, all of this rocky jigsaw puzzle is called the **lithosphere**. **Plate tectonics** is the study of these rocky tectonic plates and how they move and change. Plates move around in different ways. Sometimes they push together at a **convergent boundary**. At these boundaries, volcanoes and mountains form as two chunks of rock push together. At **transform boundaries**, the plates slide past each other. Sometimes the sliding isn't very smooth, and earthquakes happen. At **divergent boundaries** like **mid-ocean ridges**, the plates move away from each other and new rock oozes up from underneath, adding to the sea floor.

In this experiment, you're going to model what happens when the ocean floor spreads.

Problem: Create a model of the spreading sea floor.

Materials

- Cardboard cylindrical container
- White 8 ½ x 11 in. piece of paper
- Ruler
- Colored pencils
- Pencil
- Tape
- Scissors

Procedure

1. Take a cardboard, cylinder-shaped container (such as a Quaker Oats container) and cut a vertical slit about 3 ½ inches long and ¼ inch wide down the side. The slit is your mid-ocean ridge, the place where the plates are moving away from each other.
2. Cut a piece of white paper in half lengthwise.
3. On each piece of paper, measure two inches in from the end and fold the paper so that there is a section on each end to hold onto.
4. Measure inward another two inches from the fold, and color in that two-inch wide strip.
5. Continue to measure in two-inch segments, coloring every other section.
6. Place the unfolded ends of the paper into the slit in the container. Holding them by the folds, pull the pieces of paper out again. If you imagine that the slit is the midocean ridge where the plates are moving away from each other, the paper is the new liquid rock coming out from the ridge. The first bit of paper to come out is the oldest rock, and the last section of paper to come out is the youngest. Imagine that your paper goes on forever. Soon, the first bit you took out of the hole will be far away from the midocean ridge. Of course, "soon" in geological time is a very long time in human terms!
7. Take your pieces of paper and tape the ends that aren't folded to the pencil.
8. Put the pencil inside of the container and pull the ends of the pieces of paper up through the slit.
9. Twist the pencil one way, and the papers will move out and away from each other. This is what happens at a divergent plate boundary on the mid-ocean ridges.
10. Twist the pencil the other way, and the papers will move in and toward each other. This is what happens at a convergent plate boundary. Imagine what would happen if those papers had bumps on them. They'd get all bunched together at the hole, and create mountains.

Why?

How does seafloor spreading work? Imagine that you're baking a really delicious chocolate cake. After some time in the oven, the top of the crust begins to crack and the pieces of the cake's top move away from each other. Unfortunately, you've made the batter a little too wet, and the cake underneath is not yet cooked. As the top pieces of the cake crack and move away from each other, the gooey underside of the cake moves up into the crack, pushing the pieces of the cake's top crust away from each other.

The hard crust of the cake is the lithosphere. Underneath the hard part of the earth is the **asthenosphere**, the gooey liquid rock that sits underneath the hard outer crust. Sea floor spreading happens at places where plates are moving away from each other and where the liquid rock from the asthenosphere can come up to the lithosphere. In the places where the plates are moving apart, **magma** (liquid rock) moves up into the cracks and solidifies, making a new ocean floor, just like cake batter would ooze up through the cracks.

One intriguing thing about the rock that comes from seafloor spreading is that it shows the history of the Earth. For example, every million years the Earth's magnetic poles tend to reverse 4 or 5 times. South becomes north and north becomes south. The rocks on the seafloor show the history of the magnetic changes in the earth. They are magnetized according to wherever the pole was at the time the rock formed and cooled on the sea floor. This allows scientists to understand the magnetic history of the earth and the history of these rocks. You illustrated this magnetic shift when you colored in every other two-inch section.

Pollution Experiment

In today's world we make it a point to raise our children to be environmentally conscious. We teach them to treasure the Earth, and the animals and plants that live here with us. And at a very early age, your child is learning terms like "pollution", "recycle", "organic" and "earth-friendly".

Because of this early, environmentally-conscious outlook, kids tend to look at our planet in a rather protective way. Often even the youngest kids notice that factories, cars, and trucks put smoke and smog into the air we breathe. This activity helps your child become even more aware of what happens when pollution enters our air, and reinforces her love of the environment, which we all should share.

What You Need:

- 3 1-quart jars with lids
- Measuring cup
- 3 small potted green plants
- Vinegar or lemon juice
- 6 labels or strips of masking tape
- Pen or marker
- Spiral or composition notebook
- Pencil
- Crayons

What You Do:

1. Begin this activity by discussing with your child what some of the different uses of water are. Ask her why she thinks we need clean water. Be sure to remind her that we all need clean water not only for drinking and bathing, but also for growing the crops we use to feed ourselves and the animals that live on earth with us.
2. Talk to her about the ways in which our air can be polluted. Give some examples of pollution she may have seen in your area, like the exhaust from your car or a factory on the side of the highway. Explain to her how pollution in the air travels up into the raindrops in the clouds in the sky. This means that our rain can become polluted too, which can sometimes lead to what is known as "acid rain." Note: There are many books that explain this concept as well if you would like to do some extra research! Perhaps you can read one these books and have this discussion with her as you read. (A great book to try is *What Causes Acid Rain?* By Issac Asimov)
3. Next, explain that you are going to do an experiment that will show what acid rain does to plants. It will also show how important it is to have clean water for plants and animals.
4. Before you begin the experiment, use your pen and the labels or masking tape to label each jar and each plant. Label the first plant and jar "a little acid". Label the next plant and jar "a lot of acid". Finally label the third jar and plant, "plain water."
5. Next, you will need to mix the water for the plants. Begin by explaining that the vinegar (or lemon juice) is an acid just like the acid that gets in the raindrops from the pollution in the air caused by the factories, cars, and trucks we have here on earth.
6. Mix the water for the plant that will get "a little acid" by measuring $\frac{1}{4}$ cup of vinegar or lemon juice and placing it into the jar labeled "a little acid" and fill the rest of the jar with tap water.
7. For the plant receiving "a lot of acid", pour 1 cup of the vinegar or lemon juice into the jar and fill the rest with tap water.
8. Fill the third jar, labeled "plain water", just with tap water.
9. Next, have her create her "Observation Journal" using the spiral or composition notebook. Label the first page with today's date and have her draw a picture of each plant with each of their corresponding labels. You may want to have her write or dictate a sentence or two describing each plant's appearance, which at this point should be the same for all three plants: green and healthy.
10. Water each plant (being sure to use only about a $\frac{1}{4}$ of the jar each time at the most) with the water from the corresponding jar containing either a lot of acid, a little acid or plain water.
11. Every two or three days continue to water the three plants using the water from the original jars. Be sure to make note of and discuss which plant looks best. Which one looks the worst? How do the plants differ in color? Continue to have her record all of her observations in the journal by drawing and writing what she sees after each watering.
12. Water and observe the plants for at least one week. Throughout the experiment, discuss the changes that have occurred in the three plants and ask her why she thinks the results turned out the way they did.
13. At the end of the experiment, talk with her about which plant is the healthiest and which plant is the least healthy, working with her to reach a conclusion about what happened to the plants. Have her record all of her conclusions in her journal.
14. Assist her in making the connection between this experiment and our own environment and the effects of acid rain in our world.

This experiment is not only interesting, but it's a simple way you and your child can explore the sometimes-complicated concepts of pollution and its environmental consequences. Along the way, you might even inspire her to get excited about making some "green" changes in her life!

Rising 5th Grade Social Studies

Welcome to 5th Grade! To prepare for 5th grade Social Studies, please complete steps A, B, and C below.

Completing these steps will make class easier and more fun. Each of these steps will prepare you to succeed in the first unit of the year!

A. Watch the documentary, [“Desert Empires - History Of Africa”](#), then answer the questions to the right.

B. Read the text about West African kingdoms below. Then add to your answers on the right.

1. What goods were traded in West African kingdoms? Why were they traded?

2. Why was Mansa Musa an important ruler? Give 2 reasons.

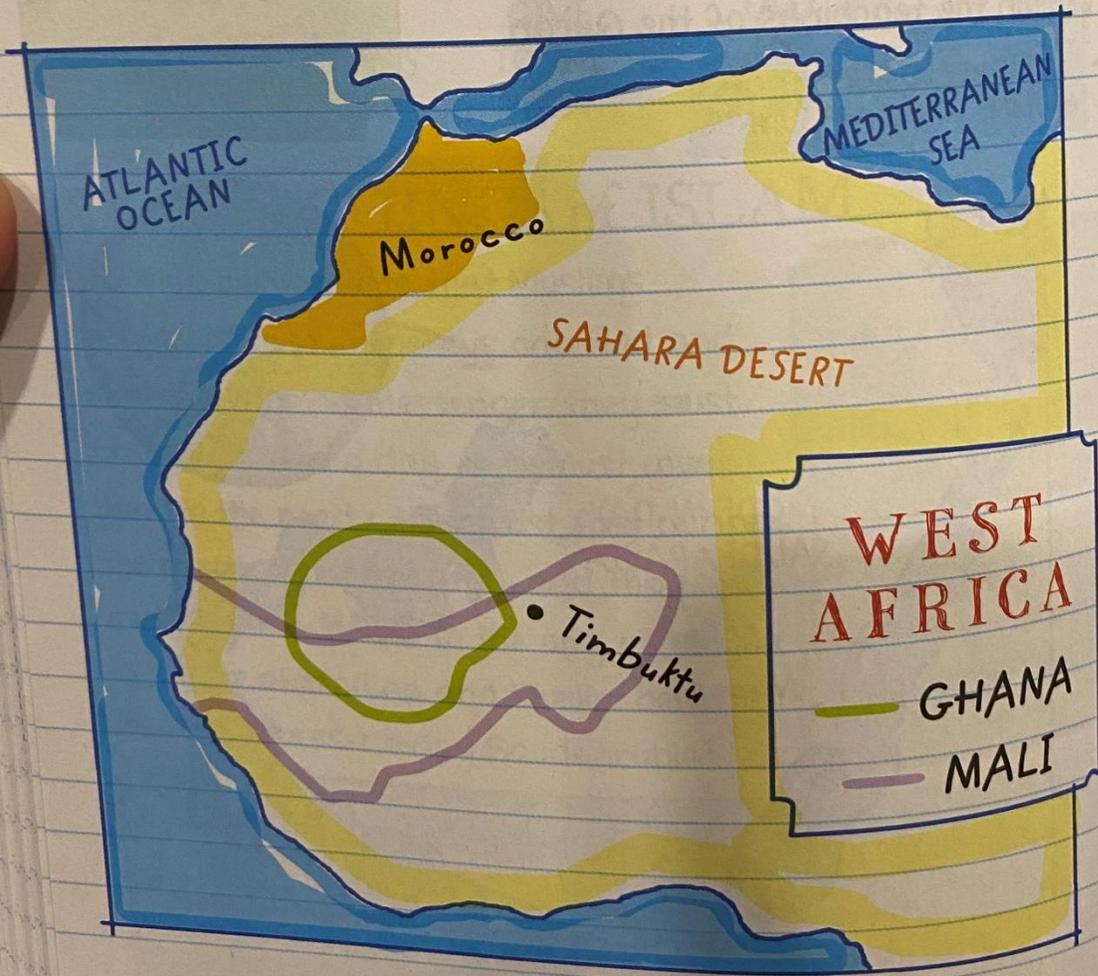

3. Write down 3 questions you have after watching the documentary and reading the text. They can be about anything you are wondering about, or anything that was confusing in the documentary.

C. **Geography:** Complete the map quiz until you memorize where all the continents and oceans are.

What is the fastest time you can complete the quiz? Try to get 100% in less than a minute!

The ISLAMIC KINGDOMS of WEST AFRICA

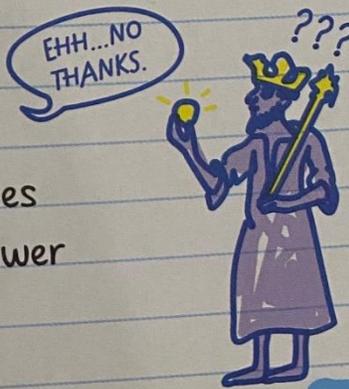

In western Africa, two important commodities were salt and gold. Salt came from the central Sahara, and people from the rain forest in West Africa didn't have any. They wanted it for seasoning and to preserve meat, so they traded gold for salt.

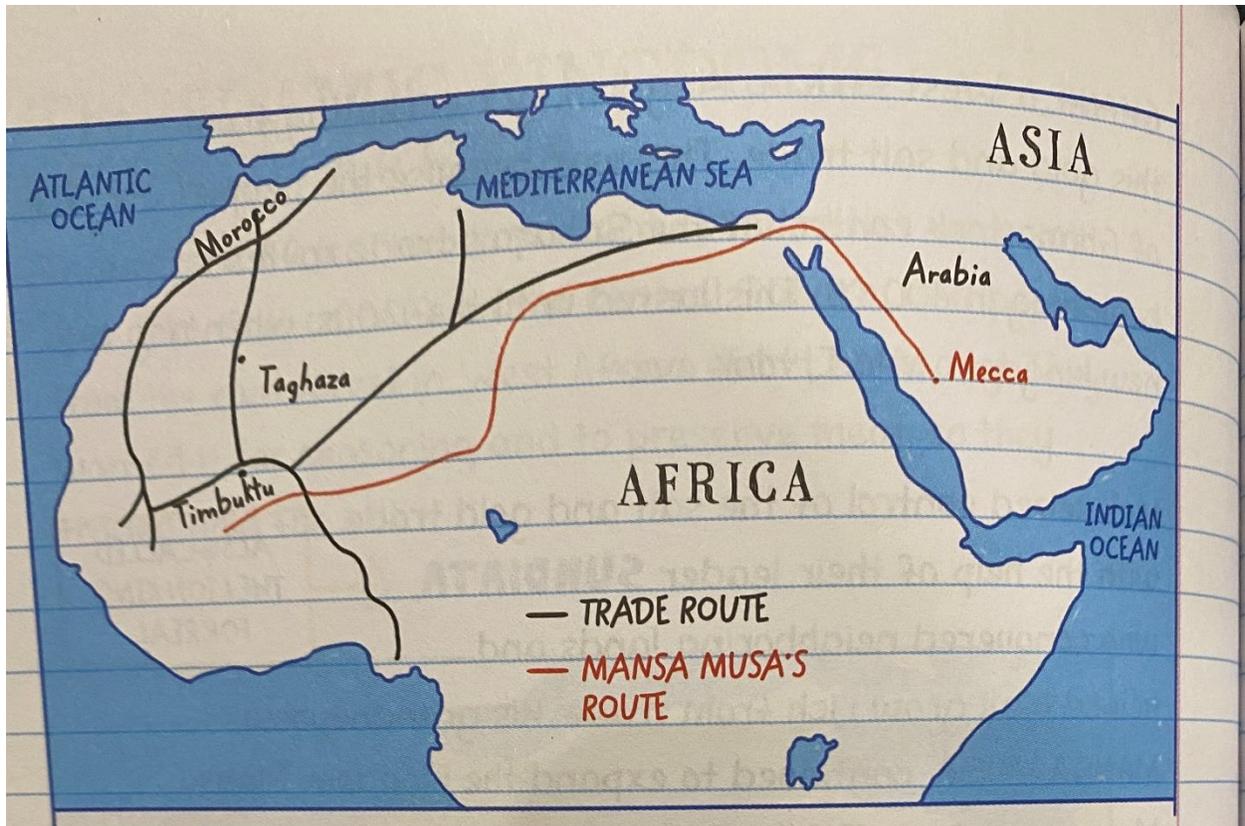

GHANA, a West African kingdom, grew wealthy from this gold and salt trade. This was because the people of Ghana took control of the Sahara's trade routes beginning in 400 CE. This lasted until the 1200s, when a new kingdom, **MALI**, took over.

Mali seized control of the salt and gold trade with the help of their leader **SUNDIATA**, who conquered neighboring lands and helped Mali grow rich from trade. His grandnephew, **MANSA MUSA**, continued to expand the kingdom. Mansa Musa ruled from 1312 to 1337 and created a strong central government, dividing the kingdom into provinces ruled by governors. He taxed trade routes, and Mali grew richer. He invited scholars to teach religion, law, math, and medicine and made Mali a great center of knowledge and culture. He built mosques and libraries to make the city of **TIMBUKTU** not only a wealthy trading city but also a center of learning and culture. He also made Islam Mali's official religion and went on a pilgrimage to Mecca, spending so much gold on gifts for his hosts that gold lost value. Sometime after Mansa Musa's death, the kingdom's provinces began to break away, and Mali's power dissolved.

ALSO CALLED
THE **LION KING**.
FOR REAL.

SONGHAI was one of the provinces that separated from Mali and became a major kingdom in its own right. Once a trading center within Mali, it conquered Timbuktu in 1468 and then gained control of trade in gold and salt. In less than 100 years, the Songhai Empire began to crumble. Its people fought each other, and it fell to an army from the North African nation of Morocco.
